Alla P Rozova, PA Mar 18, 8:13 AM

Your CT heart calcium score is 1, which indicates minimal calcified plaque in your coronary arteries. This score places you in the 69th percentile for men your age, meaning your calcium level is lower than about 31% of men in your age group. The scan shows your heart is normal in size with no significant abnormalities of the heart valves, pericardium, or major blood vessels.

If you have questions and would like to discuss in detail, please, call the office and schedule appointment with your PCP.

Narrative & Impression

CT CORONARY CALCIUM SCORE: 3/17/2026 19:59

CLINICAL HISTORY: 47 years of age, Male, Patient wants CT heart ca score test, as selfpay.

COMPARISON: None.

PROCEDURE COMMENTS:

Image Acquisition by Series (and Radiation Doses in CTDIvol):

- 1. Prospectively gated non contrast CT of the heart.

Dose information: Based on a 32 cm phantom, the estimated radiation dose (CTDIvol [mGy]) for each series in this exam is 0.03,0.03,4.9. The estimated cumulative dose (DLP [mGy-cm]) is 80.43.

Intravenous Contrast Medium Administered: None

3D post-processing was performed on an independent workstation by the 3D Lab and reformatted images were pushed to PACS.

FINDINGS:

CORONARY CALCIFICATIONS:

Visual assessment of the coronary arteries shows minimal calcified plaque burden. Quantitative calcium score is 1.

Specific artery assessments are as follows:

- Left Main (LM): 0
- Left Anterior Descending (LAD): 1
- Left Circumflex (LCX): 0
- Right Coronary Artery (RCA): 0

CARDIOVASCULAR:

Heart: Normal in size. No significant valvular calcification.

Pericardium: No pericardial effusion.

Pulmonary arteries: Not enlarged.

Thoracic aorta: No significant abnormality in the visualized portions.

REMAINING CHEST:

Medical devices: None.

Lymph nodes: No visible lymphadenopathy.

Other mediastinal structures: No significant abnormality.

Lungs, airways, and pleura: No significant abnormality in the visible portions.

Upper abdomen: Mild steatosis of the liver noted.

Bones and soft tissues: No significant abnormality.

IMPRESSION:

- 1. Minimal calcific plaque burden. The calcium score is 1 which places the patient in the 69th percentile for age and sex. Of note, there is an additional small calcification in the LAD which is below the threshold for calcium scoring and is not reflected in the calcium score.
- 2. Mild steatosis of the liver.
